

Procore for Multifamily Housing

Buildings with five or more housing units comprise about 25 percent of all housing constructed. In 2014, the figure was 35 percent. To service this growing market need, construction firms look to Procore.

PROCORE CLIENT: REGIS CONTRACTORS

Time Is Money

Time has a lower monetary cost during the design phase of a construction project, but when construction is delayed, and owner occupancy is postponed, that time becomes expensive. While no construction project is immune to surprises, costly delays and rework can be alleviated if projects are closely managed with effective document control, project collaboration, and access to real time project information.

“The review process used to take weeks, but now even the largest documents can be shared immediately and the review process can be completed in days or even hours—that’s crucial.”

TONY JOYCE

Project Engineer at Avalon Bay

Procore offers a complete project management platform that increases project efficiency and productivity by streamlining project communication and documentation. By completing projects faster, owner occupancy is accelerated and multifamily construction firms experience expedited ROI.
